

Gas Detection

A part of The Bruusgaard System

All vessels are prone to gas hazards on board. Efficient and safe gas detection solutions are essential for safe operations at sea. But which solution?

We often encounter setups that are both unnecessarily expensive and time-consuming.

Why not streamline them?

We tailor gas detection solutions to your operations, standardizing them for efficiency and scalability. Together with the industry's most efficient aftermarket, we ensure that you have the gas detection equipment and consumables you need when you need them without spending excessive time and money. Nothing more, nothing less.

Significant time and cost savings

Consolidated and risk-free logistics

Proper crew training for increased safety

Optimized spares and consumables usage

Standardized solutions

Structure is key to ensuring efficiency. We have organized our gas detection solutions in tidy cabinets with everything you need to achieve safety and compliance.

TBS Gas Detection Large

TBS Gas Detection Large is designed for large vessels, providing advanced onboard gas detection to meet the strictest maritime safety regulations. Ideal for shipping companies needing comprehensive monitoring and high-level safety compliance.

TBS Gas Detection Small

TBS Gas Detection Small suits mid-sized vessels, offering reliable gas detection that meets standard maritime regulations. Perfect for operators seeking a balance between effective monitoring and regulatory compliance.

TBS Gas Detection Compact

TBS Gas Detection Compact is for smaller vessels and individual use, providing basic onboard gas detection for those with minimal regulatory requirements. Great for users needing a simple, easy-to-use solution that ensures safety without complexity.

All cabinets are customizable to meet your vessel's specifications.
